

o4 data manager

- Bespoke database & interfaces tailored to your company needs.
- Flexible, can be changed and modified as your needs require.
- Friendly easy to use interface designed to suit your data.
- Simplifies the data collection and manipulation required by your company.
- Uses Microsoft Access database engine for maximum compatibility
- Local consultation, design & support.
- On-site setup, installation and training.

Most of the software that you use from day-to-day will be 'off-the-shelf' packages created by huge organisations that will often be used by millions of people. Therefore, more often than not business practice needs to adapt to work with the software.

Alternatively bespoke software is designed specifically for you and your business and although initially it can appear to be more expensive, the long term benefits of this approach nearly always outweigh the cost.

Benefits of Bespoke Software

It is tailor-made to fit your particular business needs so will run exactly the way you want it to.

It can be programmed to run alongside your existing software or even communicate with it. The learning curve is

reduced as it is written specifically to meet your needs and there are no pointless add-ons.

If you can conceive an idea then it can generally be programmed. This gives you unlimited software resources that you will not find with off-the-shelf software.

It is much more flexible than packaged software and can be modified and changed over time as your requirements and business practices change.

It is often an on-going relationship that grows with your business, so when your needs change and you want something adding, it can be done.

Excel users & Other Data Sources.

In most cases we can convert your existing data collections to work with our systems.
